

DATA INTEGRATION WITH SNOWFLAKE OPENFLOW

ADESSO SUPPORTS THE IMPLEMENTATION OF SNOWFLAKE OPENFLOW

With adesso at your side, modern data integration becomes a competitive advantage. Thanks to close collaboration with Snowflake and the powerful Openflow solution, adesso creates efficient, cloud-based data pipelines. This enables you to transform your data into valuable insights – quickly, securely and scalably.

In an increasingly data-driven world, the ability to process information quickly, flexibly and efficiently is a decisive competitive advantage. This is exactly where adesso comes in, together with Snowflake Openflow: As a solution fully integrated into the Snowflake Data Cloud, Openflow enables the simple, scalable and high-performance implementation of data integration processes – without media breaks or time-consuming workarounds.

adesso uses this powerful technology to support companies in modernising their data landscape. With Openflow, structured and unstructured data sources can be intuitively connected, data streams orchestrated and integration processes flexibly controlled. Particularly noteworthy is the Apache NiFi base, which combines visual low-code design with powerful integration capabilities.

The special added value: adesso not only provides technological expertise, but also accompanies you every step of the way – from strategic consulting and architecture to productive implementation. Customers benefit from tailor-made solutions that are quickly ready for use and can be seamlessly integrated into existing platforms.
